									То		es 0.00 0.00		0.00	1411DOT FTOJECIS	77	1	koole 100 bitage replacement over Squamscott kive
										Total Road Miles		0.00		Climate Ready Culverts	#	0	N/A

Note: Total miles impacted per road were calculated using the greatest sea-level scenario (6.3') extent.

The Climate Risk in the Seacoast: Assessing Vulnerability of Municipal Assets and Resources to Climate Change (C-RiSe) project provides maps and assessments of flood impacts to infrastructure and natural resources in the coastal Great Bay region associated with projected increases in storm surge, sea level, and precipitation.

TRANSPORTATION ASSETS: TOWN OF NEWFIELDS

Extent of Projected Tidal Flooding Sea-Level Rise 1.7', 4.0', 6.3'

SLR Legend Impact Legend

NHDOT projects were derived from various sources within the New Hampshire Department of Transportation and may have been updated at different times and with varying levels of accuracy. Given redundancies and the need to provide meaningful maps for planning purposes, SRPC generalized projects according to vulnerable areas. A more comprehensive list of impacted projects can be viewed within the community's vulnerability assessment chapter.

Sea-Level Rise Scenarios

Please note that the sea-level rise scenarios used in this assessment were derived from the Wake, 2011 report (refer to table of values below from this report). These scenarios were selected prior to the release of the Science and Technical Advisory Panel Report to the N.H. Coastal Risks & Hazards Commission, in August, 2014 [1]. While slightly different than the scenarios cited in that report, they yield coverage estimates that are within the mapping margin of error.

[1] Wake CP, Kirshen P, Huber M, Knuuti K, and Stampone M (2014) Sea-level Rise, Storm Surges, and Extreme Precipitation in Coastal New Hampshire: Analysis of Past and Projected Future Trends, prepared by the Science and Technical Advisory Panel (STAP) for the New Hampshire Coastal Risks and Hazards Commission.

	20	50	2100			
	Lower	Higher	Lower	Higher		
Current Elevation of MHHW a,b	4.4	4.4	4.4	4.4		
00-Year Flood Height	6.8	6.8	6.8	6.8		
ubsidence	0.0	0.0	0.0	0.0		
Sustatic SLR	1.0	1.7	2.5	6.3		
Total Stillwater Elevation a.c	12.2	12.9	13.7	17.5		

c - Total Stillwater Elevation may not equal total of components due to rounding

Table 13. Estimates (in feet) of future 100-year flood Stillwater elevations at Fort Point under lower and higher emission scenarios (relative to NAVD88) based on the statistical analysis presented in this report.
